

ABSTRACT

The present invention encompasses methods of preparing a recombinant viral vector, within a procaryotic cell, by intermolecular homologous recombination, methods of preparing an infectious viral particle containing the recombinant viral vector and pharmaceutical compositions comprising said vector or particle. The invention also encompasses the therapeutic use of said vector or particle, especially in human gene therapy.

<p>(54) Title: METHOD OF PREPARING A VIRAL VECTOR BY HOMOLOGOUS INTERMOLECULAR RECOMBINATION</p> <p>(54) Titre: PROCEDE DE PREPARATION D'UN VECTEUR VIRAL PAR RECOMBINAISON HOMOLOGUE INTERMOLECULAIRE</p>		
<p>(57) Abstract</p> <p>Method of preparing within a procaryotic cell a recombinant viral vector by intermolecular homologous recombination, method of preparing an infectious viral particle containing such a vector and pharmaceutical composition comprising said vector or particle. The invention also concerns the therapeutic use of said vector or particle, especially in human gene therapy.</p>		
<p>(57) Abrégé</p> <p>L'invention concerne un procédé pour préparer dans une cellule procaryote un vecteur viral recombinant par recombinaison homologue intermoléculaire, un procédé pour préparer une particule virale infectieuse contenant un tel vecteur, ainsi qu'une composition pharmaceutique les comprenant. L'invention couvre également leur usage thérapeutique, notamment dans le cadre de la thérapie génique appliquée à l'homme.</p>
